

AFF1 Break Apart FISH Probe Kit

Introduction

The AFF1 Break Apart FISH Probe Kit is designed to detect rearrangements in the human *AFF1* gene located on chromosome band 4q21.3. In addition to revealing breaks, which can lead to translocation of parts of the gene, inversion, or its fusion to other genes, the probe set can also be used to identify other *AFF1* aberrations such as deletions or amplifications. Rearrangements and abnormal expression of the *AFF1* gene – also known as *AF4*, *PBM1* or *MLLT2* – have been observed in B-cell acute lymphocytic leukemias and numerous other hematological malignancies.

Intended Use
To detect rearrangements in the human <i>AFF1</i> gene located on chromosome band 4q21.3.

Probe Design

LSP AFF1 5' FISH Probe covers the 5' (start) portion of the *AFF1* gene and some adjacent genomic sequences. LSP AFF1 3' FISH Probe covers the 3' (end) part as well as sequences downstream of the gene. The two probes are flanking a region in the *AFF1* gene in which variable breakpoints have been observed.

Not to Scale

Cat. No.	Volume
